

■ □ AI FLUENCY FOR YOUR WHOLE SCHOOL: STAFF AND STUDENTS

Helping your school thrive in the age of AI.

Practical, hands-on AI fluency. Equipping teachers to guide AI well, and students to learn with it and build with it, responsibly.

THE MANDATE, AND THE REALITY

Schools are told to adopt AI. Staff do not yet feel ready to.

50%+	£187m	10m	2×
of UK young people have used generative AI tools DfE support materials, 2025	TechFirst programme, aiming to reach a million secondary students UK Government, 2025	workers' roles expected to feature AI by 2035 DSIT research	private-school teachers as likely to have had formal AI training Sutton Trust

THE EXTERNAL PUSH

AI is already in classrooms, and government is investing fast. The £187m TechFirst programme aims to reach a million secondary students, and DSIT research expects AI to feature in around 10 million workers' roles by 2035. Other nations have moved further: China made AI compulsory in schools from September 2025. The message to schools is clear. Act.

THE TEACHER-SIDE REALITY

On the ground it feels different. The DfE's own work found "uncertainty, concern and scepticism" among teachers. Detection tools are unreliable, so staff feel they cannot police misuse. There is a training gap too: Sutton Trust research found private-school teachers about twice as likely to have had formal AI training. The deeper worry, as education specialists have warned, is the erosion of critical thinking when a chatbot hands over the answer with no work involved.

The question for schools is no longer whether to use AI. It is whether students and staff are shown how to use it to think harder, not less.

THE GAP WORTH CLOSING

Schools are caught between a mandate to adopt AI and a workforce that does not yet feel confident or equipped to do it well and safely. The DfE sees "more immediate benefits and fewer risks from teacher-facing use", which is exactly why equipping staff first is the sensible, lowest-risk place to begin. Arslan Institute exists to close that gap: practical, hands-on, evidence-aware fluency for staff and students, grounded in DfE guidance and KCSIE.

"...so they can shape the future, not be shaped by it."

Keir Starmer, London Tech Week 2025

■ □ ONE MISSION, TWO ROUTES

Two ways to bring AI fluency to your school.

Equip the teachers, work directly with the students, or both. Self-route to the offer that fits your school.

FOR YOUR STAFF · THE FOUNDATION

Teach the Teacher

AI fluency CPD for teaching staff.

SECTION ONE · PAGES 04 TO 05

FOR YOUR STUDENTS · VISIBLE CAPABILITY

Teach the Student

Hands-on AI fluency workshops for student groups.

AI for Learning

AI for Building

SECTION TWO · PAGES 06 TO 08

Both can be booked together or separately, whichever fits the school's priorities.

■ ■ THE FIRST OFFER · SECTION ONE

Teach the Teacher.

A practical, hands-on CPD session that gives every teacher the confidence to use AI well: to save time on routine work, to deepen learning in their own subject, and to guide students towards good use rather than trying to police it. Grounded throughout in DfE guidance and KCSIE.

OBJECTIVE 01 · CONFIDENCE

Confident, safe users

Every teacher becomes a capable, safe user of AI, whatever their starting point, with clear rules on what is and is not safe to enter into a tool.

OBJECTIVE 02 · THE CRAFT

Learning, not shortcutting

Staff use AI at each stage of learning, encoding, retrieval, spacing and feedback, to deepen understanding in their own subject rather than replace it.

OBJECTIVE 03 · GUIDANCE

Guiding students well

Staff leave able to make good use more attractive than shortcuts, so students choose to use AI to think harder, not less.

FOUR STARTING POINTS

Staff are met at the right level, from digital foundations to an agents masterclass.

SHAPED BY A SHORT SURVEY

A five-minute pre-workshop survey sets the level and surfaces the concerns the session then addresses by name.

IMPACT YOU CAN REPORT

The same survey a term later gives leadership, governors and the council before-and-after evidence of movement.

WHAT TEACHERS TAKE AWAY

An AI fluency completion certificate, a subject action plan for next term, and a full kit of prompts, checklists and a classroom AI agreement.

HOW IT FITS

One hour, twilight, half day or full INSET. Delivered on the school's own licensed tools, in person or online. Covers and extends the DfE's four official AI modules.

■ □ TEACH THE TEACHER · HOW THE SESSION RUNS

What happens in the room.

A hands-on staff workshop, grounded in DfE guidance and KCSIE, delivered on the school's own licensed tools. It covers and extends the DfE's four official AI modules, and adapts to the level the pre-workshop survey identifies.

- 1 **What AI is, and what it does to learning.**
A plain, working grasp of how generative AI produces answers, why it is confidently wrong, and what an AI agent is, with the evidence on what happens to thinking when AI does the work.
- 2 **Everyday AI that gives time back.**
The practical, time-saving uses: lesson planning, resources and differentiation, quizzes, feedback and report comments, done on the school's licensed tools within clear data protection rules.
- 3 **Prompting well, and catching errors.**
The DfE FACTS framework for useful results, then a simple verification routine staff can teach onwards to students.
- 4 **Matching tools to the stages of learning.**
How the school's approved tools, Copilot in Microsoft schools or Gemini and NotebookLM in Google schools, support encoding, retrieval, spacing and feedback so AI deepens learning.
- 5 **Inclusion and accessibility.**
Using AI to widen access: adjusting reading age, supporting EAL learners, moving between text and audio, always within pupils' plans and safeguards.
- 6 **Responsible, safe and ethical use.**
The DfE's five key risks and KCSIE, awareness of AI image abuse, and the honest truth on why detection fails, with assessment designed so copying gives no advantage.
- 7 **The changing world and durable skills.**
Why the world students enter is shifting, and which human capabilities to build deliberately as AI takes on routine work.
- 8 **A plan built around your own subject.**
Every teacher leaves with two or three specific, subject-specific moves for next term, from a ready template.

■ □ YOUR TAKE-HOME KIT

- A personal subject action plan for the coming term.
- A student AI maturity guide, from understanding AI to using it well to building with it, which also bridges to the student workshops.
- The AI-to-learning-stage map.
- A prompt guide built on the DfE FACTS framework.
- A verification checklist for sense-checking AI output.
- A classroom AI agreement, a permitted and not-permitted table drafted by staff in the session.

KEY OUTPUT

An AI fluency completion certificate. Evidence of externally delivered CPD.

OPTIONAL MASTERCLASS

Agents and advanced use. A specialist add-on for confident staff on AI agents and automations, building a simple working automation during the session.

Delivered within the school's licensed tools and data protection rules. Led by a registered pharmacist from a regulated industry, where handling sensitive data with rigour is a professional standard. In person, or online by arrangement. Group sizes of 10 to 20.

■ □ THE SECOND OFFER · SECTION TWO

Teach the Student.

Hands-on workshops that take sixth-formers from AI awareness to responsible, useful capability. Delivered as two distinct workshops, booked on their own or run as a sequence.

WORKSHOP 01 · THE ON-RAMP

AI for Learning

Study smarter with AI instead of shortcutting around it, and confidently debate global AI topics.

Debate and discussion in every session.
Students leave with clear, defensible views on using AI to learn.

WORKSHOP 02 · THE PROOF

AI for Building

Design and build a real, working AI tool in a single sprint, then pitch it back and defend every decision.

Hands-on building, then present and defend.
Students leave with something they made and can explain.

SHARED THROUGHOUT

Discussion and debate, hands-on work on their own material, and a present-and-defend finish.

TOGETHER THEY COVER

All four dimensions of the UNESCO AI competency framework for students.

TEACH THE STUDENT

AI FOR LEARNING

A smarter way to study, argued out loud.

Students learn to use AI to sharpen their thinking, not shortcut it, and they debate how and when to use it in every session. They leave with a method, a study assistant they built, and clear views they can defend.

The workshop runs on the same learning science it teaches. Students first learn how to study properly, then learn to layer AI on top to make that proven method faster and sharper. They feel the difference between thinking they understand and actually understanding.

THE METHOD THEY TAKE AWAY · LEARNING WITH AI, NOT FROM IT

1

Prime
Map a topic before class, so new detail has somewhere to attach.

2

Encode
Turn dense material into plain explanations and analogies.

3

Retrieve
Recall closed-book with exam-style questions, not rereading.

4

Space
Repeat over spaced intervals and interleave topics.

5

Feedback
Surface the one flaw, fix it, feed it into the next cycle.

Builds. A personal, repeatable way to study with AI, on their own real subjects.

THE TOOLS THEY USE

Led by NotebookLM, which turns a student's own notes, textbooks and past papers into study guides, quizzes and clear explanations. Students also build a study assistant they control, set to question them, never to hand over answers.

JUDGEMENT THEY BUILD

Students learn why AI can sound confident and still be wrong, and catch it doing it in their own subject. They learn to spot deepfakes, check a source, and use AI within their school's and the exam boards' rules.

ARGUING IT, NOT JUST HEARING IT

As AI hands everyone a fluent answer, the human edge is judging that answer and defending your own thinking. Every session, students argue real questions out loud, learn to argue a side they disagree with, and say what would change their mind.

THE ONE RULE

Every student argues a side they disagree with, at least once. Build the case, not win the point.

"Using AI for your homework is cheating yourself, not the system."

"AI will make our generation smarter, or more dependent."

WHAT THEY LEAVE ABLE TO DO

- Study the way that actually works, having felt for themselves why rereading and cramming build so little.

■ Layer AI on top of that method, so a proven way of studying gets faster and sharper.

■ Spot when AI is confidently wrong, and catch a real error in their own subject.
- Build and keep their own study assistant that quizzes them, instead of handing them the answers.

■ Argue a side they disagree with, defend their own view under questioning, and say what would change their mind.

OPTIONAL SESSION

AI, Society & You. A citizenship discussion on jobs, creativity and IP, deepfakes, the environmental cost, and wellbeing.

FORMAT A spaced programme, or a single module. In person, or online by arrangement.	GROUP SIZE 10 to 12 students	DESIGNED FOR Primarily sixth form	ALIGNS WITH Your safeguarding & AI policy
---	--	---	---

TEACH THE STUDENT

AI FOR BUILDING

From using AI to building with it.

Every student brings a real problem, or something they have always wished existed. In a single hands-on sprint they design it, build a working AI tool, and pitch and defend it. They leave with something they made and can explain, ready for a personal statement, an interview, and whatever comes next.

39%	55%	No.1	Degrees
of workers' core skills change by 2030	faster skill change in AI-exposed jobs	analytical thinking, the skill employers rank essential	dropped for many roles by Google, IBM and Apple
WEF, Future of Jobs 2025	PwC, 2025	WEF, 2025	Employer hiring policy

THE METHOD · THE BUILD PROCESS PROFESSIONALS USE, NOT A CODING CLASS

1	2	3	4	5	6	7
Problem & Insight	Validate	Scope & Plan	Build	Find the Flaw	Iterate	Present & Defend
Start from a real problem worth solving.	Pressure-test it before building.	Cut to the smallest version that proves it.	No-code or code, whichever fits.	Use it, break it, find where it fails.	Where the real thinking happens.	Explain and defend it under questioning.

WHERE THE THINKING ACTUALLY HAPPENS

Find the flaw. Students try to break each other's builds and report the single biggest weakness. In building, a flaw you find is a gift, and this is critical thinking made hands-on.

Present & defend. Each student pitches their build, then takes probing questions from the room. Defending your decisions under pressure is a rare skill at any age, and it is where the confidence is earned.

WHAT THEY BUILD, IN ANY SUBJECT

History, drama, sciences, art, business, not just for the computer scientists.

An app or site A revision hub, a source explorer, a society page.	An automation A weekly digest of opportunities, run on a trigger.
A custom assistant A revision tutor loaded with their own notes.	A coded build A study timer with real logic.

WHAT THEY TAKE HOME

The working build. A live link or a recording of the tool they made.

A one-page build log. The problem, who it was for, the biggest flaw they found and fixed, and what they would do next. This is what turns one afternoon into real personal-statement and interview evidence.

THE SKILLS THEY BUILD

This is the build process professionals use, run like a founder would run it. Students start from a real problem, cut it down to what they can actually ship, build it, find its flaws, improve it, and defend their decisions. They practise problem-solving, scoping, decision-making and presenting under questioning, the skills that rise in value as AI does more of the routine work.

WHAT THEY LEAVE ABLE TO DO

- | | |
|---|--|
| <ul style="list-style-type: none">Take a real problem they care about and build a working AI tool that addresses it, in a single sitting.Cut an idea down to what can actually be built and shipped, instead of over-planning it.Explain the whole thing clearly enough to use it in a personal statement or interview. | <ul style="list-style-type: none">Find the weak points in their own and others' work, and improve a build from what they learn.Pitch what they made and defend their decisions under questioning. |

■ □ ABOUT ARSLAN

Led by someone building with AI in the real world.

Arslan Manzoor is a data science manager leading AI implementation in a major pharmaceutical company, turning emerging technology into practical tools, workflows and decision-support systems used by real teams. He is also a qualified UK pharmacist, so he knows what it means to combine deep domain expertise with modern AI.

He built Arslan Institute to help schools, their staff and their students prepare for a world being reshaped by AI. Academic achievement still matters, but success will depend more and more on the ability to learn independently, think critically, communicate clearly, adapt quickly, and use powerful tools with judgement.

Because he works in a regulated industry, data protection, safeguarding awareness and academic integrity are treated with real rigour, not as an afterthought.

Arslan Manzoor

Founder · Arslan Institute

THE NEXT STEP

The best way to see the fit is a short conversation. We're happy to talk through your setting, what would help your staff and students most, and how a first session could work.
